THE CONNECT REVERSE EVO

THE NEW VERSION OF THE REVERSIBLE HARNESS

The German designer has launched a completely revised new version of their Connect Reverse harness which keeps the carrying system, "Alpine Back System", made by the alpine rucksack specialist Deuter.

According to Swing, the weight of the harness and its carrying capacity have been optimised thanks to the system X Frame, which uses aluminium stays. This system transmits the load more efficiently to the anatomically shaped belt. This reduces how heavy the weight feels, in addition to the reduction in real weight obtained by using new materials.

The geometry of the strap system allows you to settle yourself very easily into the harness after take off, giving more damping during flight in turbulence.

According to Swing, the airbag on the Connect Reverse should offer high levels of shock absorption along the whole length of the back.

HARNESSES FEATURES

- New optimized and lighter belt system
- New, optimized geometry (dampend, yet precise)
- Easier transition from take-off to flying position
- Lightweight aluminum buckles
- Air-flow independent multi-chamber airbag (shaped by titanium foam hybrid construction)
- Integrated reserve container under the seat
- Ergonomic seat for good connection and feeling for the glider
- Comfortable ergonomic back padding with mesh insert for better ventilation
- Lowered waist belt
- Lighter materials
- Easy to adjust buckles on the straps that will stay 100% in position
- Adjustable back rest angle
- Adjustable seat board tilt
- Markings for recommended standard pilot position
- Storage compartment for water bladder (3 L) + hydration tube passage
- Pocket with SOS card on the shoulder
- Two side pockets for flight accessories
- Emergency whistle
- Smooth acceleration system with large bearing pulleys
- Free running shoulder straps
- Velcro-less reserve channel system (signal color in the open position)
- Quick out carabiners and steerable reserve mountable
- Right-or left-handed versions available
- Plenty of space to stow away your bivouac equipment

A harness with travel in mind and a place for vol biv equipment...

Space for a drinks tube, important for long flights.

Hike and fly, often in the rain...
Deuter have thought of protection
against the rain.

BACKPACK FEATURES

- Sufficient volume (about 90 litres in size L), even for large gli-
ders and helmet
- Lightweight, removable lid pocket with extra-large access
- Loops on the backpack floor e.g. for attaching a sleeping bag
- Side loops for trekking poles
- 2 side pockets
- Additional pocket for hiking map
- Adjustable compression straps on the sides
- 4 reflective strips outside for better visibility
- Deuter Alpine Back carrying system with removable hip belt
- Emergency whistle
- Compatible with 3 litre hydration system by Deuter
- Lighter material
- Optimized lid pocket (easier, greater access)

A FEW DETAILS ON VIDEO...

The manufacturer has published a pres-
entation video of the harness (in English)
